Fire danger is **LOW to MODERATE**. Warmer temps and moderate Rh today have begun to dry dead fuels. Winds are very gusty in some locations around the state but due to the mix of live fuels from progressing greenup, fire danger is moderated. In areas with extensive dead fuels, especially hardwood forests, fire danger will be higher due to these strong winds. Open burning should only occur where fuels and winds are favorable.

A slight chance of a passing shower tomorrow and partly cloudy skies will keep Rh higher than today. Fire danger will continue at **LOW to MODERATE**.

[Six Minutes for Safety: An interagency safety initiative that address high-risk situations that historically get firefighters in trouble.](#)
